
$P = \min(I \cdot B_s,\ P_{\text{peak}})$
$P_{\text{peak}} = 3{,}958$ TFLOPS (H200 FP8)
Attainable performance
Evaluated
$C = 8$--64
$I \approx 16$--128
Memory-bandwidth bound
Ridge point
$I = P_{\text{peak}}/B_s \approx 825$ FLOPs/byte
Slope $= B_s$ (memory bandwidth)
Compute bound
Compute-bound requires $C \gtrsim 400$ (impractical for serving)
Increasing batch size / concurrency C
Attainable Performance (TFLOPS)
Arithmetic Intensity I (FLOPs/byte)
